Presentation Roadmap

- What is DIMHRS?
- DIMHRS-GCSS Interface Pilot
- Data Standards & Re-use
- DII COE Personnel Namespace

DIMHRS (pers/Pay) is:

- Defense Integrated Military Human Resources System (Personnel & Pay)
  - ACAT1 program for a joint, DoD-wide system
  - Being acquired by the PEO-IT Information Technology Center, New Orleans, LA
  - Evolutionary acquisition in keeping with Clinger-Cohen Act of 1996
  - Milestone I expected Q2 2000
- Requirements
  - Generated from Desert Storm
  - Support the warfighter (CINC/CJTF/J1's)
  - Support the existing personnel & pay business processes

DIMHRS Interface Pilot Strategy

- Grow DIMHRS in an evolutionary manner
  - Use pilots to reduce technical, cost, & schedule risk
    - Assess pilot in a real-world data environment -- multiple servers, data replication, failover, & transaction balancing
    - Investigate & evaluate the feasibility of COTS middleware & ERP/HR solutions
    - Identify, assess, & evaluate security solutions
- Support for the warfighter is the primary requirement in the DIMHRS MNS
    - GCSS is the warfighter's view into combat support data at the CINC & CJTF level.
    - GCSS has a high priority requirement from the CINCs (via JCS) to integrate personnel data into their data environment
    - Leverage the GCCS/GCSS installed hardware base

DIMHRS Integration Into GCSS

For DIMHRS Architecture overview

DIMHRS

DIMHRS architecture must be flexible enough to plug-into multiple places in the CINC's data environment.
